Contact: If the user wants to get a call back from us can use this to give us the necessary details for the contact.

Blogs: People who post about our webpage products and services will be displayed on this page for others to view more about the page.

**Blockframe :-** Block framing is a minimalistic approach in user interface designing wherein design can be quickly created as a block containing various user interface elements. It is essentially a “light wireframe.” It doesn’t replace wireframing or other highly detailed, functional prototypes—instead, block framing is an effective way to organize and present ideas quickly. Rather than focusing on the details and the data necessary to create your design, blocks and other shapes give you a quick idea of where the data will be and how the data will flow. It follows a minimalist approach in displaying the details.
